Introduction

Welcome to the ACCESS for ELLs 2.0 Interpretive Guide for Score Reports. The aim of the Interpretive Guide is to assist stakeholders in understanding the scores reported for ACCESS for ELLs 2.0 test takers.

About the Assessment

ACCESS for ELLs 2.0, a large-scale language proficiency test for K–12 students, is one component of WIDA’s comprehensive, standards-driven system designed to improve teaching and learning for English language learners (ELLs). The test was developed in partnership with the Center for Applied Linguistics. In 2015–16, ACCESS for ELLs 2.0 was delivered online for the first time. Prior to that year, the test had been available only as a paper and pencil assessment.

The purpose of ACCESS for ELLs 2.0 is to monitor student progress in English language proficiency (ELP) on a yearly basis and to serve as a criterion to aid in determining when ELLs have attained language proficiency comparable to that of their English-proficient peers. The test is carefully designed to be representative of the social and academic language demands within a school setting as exemplified in the WIDA English Language Development (ELD) Standards (2004, 2007, 2012).

WIDA Technical Report #1, Development and Field Test of ACCESS for ELLs (2006), provides extensive information on the conceptualization of the assessment, from its anchor in the WIDA ELD Standards through each developmental phase. It details the procedures for the initial standard setting study, which determined the cut scores for the six ELP levels. Annual Technical Report #4 explains how grade-level cluster cut scores were converted to grade-specific cut scores in 2007. To obtain a copy of these reports, please visit the WIDA website: wida.wisc.edu. In 2016 WIDA and the Center for Applied Linguistics conducted two new standard setting studies. They resulted in standards being raised for all students in the years following standard setting. The ACCESS for ELLs 2.0 2016 Standard Setting Study (Technical Report) goes into more detail about the reasons, results, and impact of standard setting.

The high quality of ACCESS for ELLs 2.0’s technical properties ensures that the test is a reliable and valid measure of English language proficiency. Therefore, WIDA is confident that the information contained in the score reports is an accurate reflection of the students’ English language proficiency at a given point in time.

Organization of This Guide

Part I addresses the types of scores reported by ACCESS for ELLs 2.0. Students in Grades 1–12 may take the test entirely online, entirely using paper booklets, or take the test online while completing the writing domain on paper. Unless stated otherwise, information about the test and score reports refer to all methods of test delivery and student response. Part I also discusses Kindergarten ACCESS for ELLs 2.0 and the differences between the Kindergarten and Grades 1–12 tests.
Part II provides examples of each type of score report. Along with each sample, detailed information is offered on the meaning and the use of the data in the reports.
This section provides some general information about ACCESS for ELLs 2.0 that you should keep in mind when considering scores. It also provides details about the types of scores generated by ACCESS for ELLs 2.0.

ACCESS for ELLs 2.0 Grade Level Clusters

ACCESS for ELLs 2.0 test forms are divided into grade-level clusters, as shown in the following table.

<table>
<thead>
<tr>
<th>Format</th>
<th>Grade-Level Clusters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Online</td>
<td>1, 2–3, 4–5, 6–8, 9–12</td>
</tr>
<tr>
<td>Paper</td>
<td>K, 1, 2, 3, 4–5, 6–8, 9–12</td>
</tr>
</tbody>
</table>

ACCESS for ELLs 2.0 uses multiple choice questions and constructed response performance-based tasks to assess the four domains of Listening, Reading, Writing, and Speaking. Different methods are used to score these four domains.

- Listening and Reading are machine scored by WIDA’s test delivery partner Data Recognition Corporation (DRC).
- Writing in Grades 1–12 is assessed through a set of performance-based tasks. Whether keyboarded or handwritten, student responses are centrally scored by trained raters at DRC, using the WIDA Writing Scoring Scale; see Speaking and Writing Scoring Scales in Part II of this guide.
- Speaking in Grades 1–12 is assessed through a set of performance-based tasks and the method used to score Speaking depends on the administration mode. Responses from students taking the online test are captured by the computer and sent to be scored centrally at DRC. Responses from students taking the paper-based Speaking test are scored locally by the Test Administrator. Both the online and paper Speaking tests are rated using the same WIDA Speaking Scoring Scale; see Speaking and Writing Scoring Scales in Part II of this guide.

ACCESS for ELLs 2.0 Online Test versus Paper Test

ACCESS for ELLs 2.0 may be administered online or as a paper-based test. Both formats generate the same types of scores. Therefore, this document does not go into much detail about how the tests differ, but the following table briefly outlines the difference.
The grade-level clusters are 1, 2–3, 4–5, 6–8, and 9–12. The grade level clusters are 1, 2, 3, 4–5, 6–8, and 9–12.

The adaptive Listening and Reading tests are administered first, and the student’s performance determines his or her tier placement for Speaking and Writing. Teachers must select which tier of the test to give to each of their students prior to the start of the test.

Writing tests are scored centrally; keyboarded responses are sent automatically to be scored, and handwritten responses need to be mailed. Handwritten responses are mailed in and the Writing responses are scored centrally.

For the Speaking test, students speak into a headset to record their answers, which are centrally scored. The paper-based Speaking test is administered and scored locally.

### Grades 1–12 ACCESS for ELLs 2.0 Scores

An individual student’s results on ACCESS for ELLs are reported as scale scores and as ELP level scores for each of the four language domains, Listening, Speaking, Reading, and Writing. (Note that ELP level scores are the same thing as proficiency level scores; both terms are in use.)

Scale scores and proficiency level scores are also reported for four different combinations of language domains. These combinations are known as composite scores, and include the following:

- Oral Language (Listening and Speaking)
- Literacy (Reading and Writing)
- Comprehension (Listening and Reading)
- Overall (a combination of all four language domains)

#### Raw Scores

Raw scores indicate the actual number of items or tasks to which the student responded correctly out of the total number of items or tasks. However, raw scores are not reported on ACCESS for ELLs 2.0 score reports because they are generally not useful for interpreting student performance. This is because raw scores do not take item difficulty into account and the total number of items correct does not provide a meaningful measure of students’ language proficiency; indeed, these scores can provide misleading information about student ability.

#### Scale Scores

In contrast to raw scores, scale scores are reported in a consistent way to take into account differences in item difficulty between test administrations. Because they are reported on a consistent scale, they allow stakeholders to compare scores across periods of time and between students. Scaling allows scores across grades and tiers to be compared on a single vertical scale from Kindergarten through Grade 12.

With the vertical scale, scale scores across grades can be compared to one another within (but not across) a language domain (Listening, Speaking, Reading, or Writing). Each domain has a separate scale; therefore, a scale score of 300 in Listening is not the same as 300 in Speaking.
The range of possible scale scores across all ACCESS for ELLs 2.0 forms, Kindergarten through grade-level cluster 9–12 is 100–600. However, depending on the tier and grade level, each form has a different range of possible scale scores that fall within this 100–600 range. For example, the Kindergarten ACCESS for ELLs test form only has a possible scale score range of 100–400.

The online version of ACCESS for ELLs 2.0 is an adaptive test, so as students progress through the test, their performances determine what questions they see next. A low-proficiency student sees easier items, and a student with a higher level of English proficiency sees more difficult questions. The student who gets 10 difficult items correct demonstrates more proficiency than the student who gets 10 easy items correct. Scaling takes this level of performance into account.

Scaling is also necessary for the paper-based test. For the paper test, students are given tiered forms of different difficulty levels. Scaling accounts for the differences in difficulty of each tiered form (A or B/C) within a grade-level cluster. Tier A, for example, contains easier items than Tier B/C. To reflect the difficulty of the Tier B/C form, a student who gets 10 items correct on the Tier B/C Listening test receives a higher ACCESS for ELLs 2.0 scale score in Listening than a student who gets 10 items correct on the Tier A Listening test.

Scaling also accounts for the differences in difficulty of the test forms across grade-level clusters. This means that a student taking the grade-level cluster 4–5 Tier A Reading test who gets all items correct receives a lower scale score in Reading than a student who gets all items correct on the grade-level cluster 6–8 Tier A Reading test.

### Proficiency Level Scores

The proficiency level scores are interpretive scores. That is, they provide stakeholders with an interpretation of the scale scores. They help stakeholders understand what the numeric score means in terms of the language skills of the student. They describe student performance in terms of the six WIDA English language proficiency levels: 1–Entering, 2–Emerging, 3–Developing, 4–Expanding, 5–Bridging, 6–Reaching.

Proficiency level scores are presented as whole numbers followed by a decimal. The whole number indicates the student’s language proficiency level based on the WIDA ELD Standards. The decimal indicates the proportion within the proficiency level range that the student’s scale score represents, rounded to the nearest tenth.

The interpretation of scale scores to proficiency level scores is grade specific, not grade-level cluster specific. For example, a Reading scale score of 355 for a fifth grade student is interpreted as Level 4.0. The same scale score for a fourth grader results in Level 4.6, and for a third grade student that scale score results in Level 5.2.
Each domain reports a separate score; therefore, the same scale score in Listening and Reading does not become the same proficiency level score. For example, consider a sixth grade student in grade-level cluster 6–8. She has a scale score of 370 for Listening and therefore has a proficiency level score of 4.3, while she has a scale score of 370 for Reading and therefore has a proficiency level score of 3.8.

**Score Caps**

**ACCESS for ELLs 2.0 Paper**

In past years, proficiency level scores for the language domains of Listening and Reading (and subsequently the Comprehension composite) on the paper test were capped for the Tier A and Tier B forms of ACCESS for ELLs 2.0. This meant that students could not receive a proficiency level score above 4.0 for Tier A and above 5.0 for Tier B, even if they answered most or all of the items correctly. Because those tiers were capped, students who took Tier A or Tier B forms were less likely to receive an Overall score above proficiency level 4.0 or 5.0, respectively.

As of the 2017–18 test, there are no score caps applied to ACCESS for ELLs 2.0 Paper in Grades 1–12.

**ACCESS for ELLs 2.0 Online**

Listening and Reading scores for the online test have never been capped. This is because Listening and Reading in the online test are adaptive, meaning that as the student navigates through the test content, the test items presented become easier or more difficult based on the student’s performance on previous items.

Students will be placed into the appropriate tier for Speaking and Writing based on their performance on the Listening and Reading domains. Students who test online may be placed into a Pre-A Tier for Speaking. The Pre-A Speaking test is a special test form that has been developed for newcomers with minimal ability to produce spoken English. It is a shortened and simplified Speaking test, and as such, scores are capped at Proficiency Level 1.

**Kindergarten ACCESS**

Score caps are not applied to the scoring of Kindergarten ACCESS for ELLs.

**Choosing When to Use Scale Scores vs. Proficiency Level Scores**

<table>
<thead>
<tr>
<th>Use scale scores to make comparisons across grade levels, but not across domains.</th>
</tr>
</thead>
<tbody>
<tr>
<td>For example, a scale score of 425 in Listening does not indicate the same proficiency level as a 425 in Speaking. This is because each domain has its own scale.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Use proficiency level scores to make comparisons across domains, but take care when comparing across grades.</th>
</tr>
</thead>
<tbody>
<tr>
<td>For example, a 2nd grade student who receives proficiency level score of 4.0 in Listening and 3.0 in Speaking indeed has progressed further in acquiring Listening skills than Speaking skills.</td>
</tr>
</tbody>
</table>

Using proficiency levels across grades is trickier, because they do not go up at the same rate as scale scores.
Composite Scores

Students receive four different composite scores derived from a combination of weighted language domain scores. The four composite scores are Oral Language, Literacy, Comprehension, and Overall score.

Composite scores are compensatory.
Compensatory means that a high score in one language domain could inflate the composite score, compensating for a low score in another language domain; conversely, a low score in a language domain could bring down the composite.

Composite scores are reported as both scale scores and as proficiency levels. To arrive at the composite scale scores, the relevant language domains are weighted and then added together. Literacy (Reading and Writing) scale scores carry greater weight than scale scores for oral language (Listening and Speaking) due to their relative emphasis and importance to success in school.

The weighting used to calculate each of the composite scale scores is shown in the following table:

<table>
<thead>
<tr>
<th>Type of Composite Score</th>
<th>Contribution of Language Domains (By Percent)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Listening</td>
</tr>
<tr>
<td>Oral Language</td>
<td>50%</td>
</tr>
<tr>
<td>Literacy</td>
<td>–</td>
</tr>
<tr>
<td>Comprehension</td>
<td>30%</td>
</tr>
<tr>
<td>Overall</td>
<td>15%</td>
</tr>
</tbody>
</table>

Once composite scale scores have been calculated, they are interpreted as composite proficiency levels. The proficiency level scores in the four language domains (Listening, Speaking, Reading and Writing) and combinations of domains offer a portrait of student language performance. This information, along with the WIDA Standards Framework components, including the WIDA Can Do Descriptors, Key Uses Edition, the Performance Definitions, the Model Performance Indicators, and the WIDA 2012 Amplification of the English Language Development (ELD) Standards (available at wida.wisc.edu), help determine the most important instructional strategies of ELLs.
The following table summarizes the two types of scores reported on ACCESS for ELLs 2.0 and offers suggestions and cautions on their uses.

<table>
<thead>
<tr>
<th>Information Provided &amp; Suggested Uses</th>
<th>Keep in Mind</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Scale Scores</strong></td>
<td></td>
</tr>
<tr>
<td>• Provides a psychometrically derived score (accounting for all tier and grade level differences) for each language domain (Listening, Speaking, Reading, and Writing)</td>
<td>• Comparisons cannot be made across Listening, Speaking, Reading, and Writing domains; only within domains</td>
</tr>
<tr>
<td>• Reports scores on a scale from 100–600</td>
<td>• To monitor growth over time, it is recommended to use scale scores and not the proficiency level scores.</td>
</tr>
<tr>
<td>• Provides way to monitor student growth over time (within a language domain)</td>
<td></td>
</tr>
<tr>
<td>• Provided on the Individual Student &amp; Student Roster Reports</td>
<td></td>
</tr>
<tr>
<td><strong>Proficiency Level Scores</strong></td>
<td></td>
</tr>
<tr>
<td>• Provides a score in terms of the six WIDA language proficiency levels</td>
<td>• Scores provide only one source of data and should be used in conjunction with other data sources when making decisions about instruction, assessment and services for English Language Learners.</td>
</tr>
<tr>
<td>• Provides individual domain scores which can be used with the WIDA Can Do Descriptors to get a profile of the student's English language performance</td>
<td>• The range of scale score points for each proficiency level cut differs depending on the grade and domain and therefore proficiency level scores do not represent interval data.</td>
</tr>
<tr>
<td>• Informs targeted language instruction using the WIDA ELD Standards</td>
<td></td>
</tr>
<tr>
<td>• Provides information to help determine program eligibility</td>
<td></td>
</tr>
<tr>
<td>• Provided on the Individual Student and Student Roster Reports</td>
<td></td>
</tr>
</tbody>
</table>

**Growth**

Many educators and administrators want to quantify the growth of students’ language development. ACCESS for ELLs scores from 2016–17 and on can be analyzed together and compared. Scores from before 2016–17 are not comparable to this year’s test.

WIDA recommends that those analyzing and interpreting growth:

- Remember that language development occurs at different paces based on the individual, his/her previous proficiency, and his/her age. It is quite common—though by no means universal—for younger, lower proficiency students to record a higher growth rate than their older, higher proficiency peers.
- Be careful about including students who took ACCESS for ELLs Online in the same dataset with students who took the paper-based test.
- Remember that while both scale scores and proficiency level scores can show growth, scale scores provided a more nuanced look at changes, because scale scores have a much larger range than proficiency level scores.
- Use scores to identify program trends, rather than looking at individual students or teachers.
- Use multiple criteria for high-stakes decisions.

**Kindergarten ACCESS for ELLs Scores**

Most of the information about ACCESS for ELLs 2.0 applies to all students in Grades K–12. However, the Kindergarten test is distinct from Grades 1–12 in several ways.
• The ACCESS for ELLs Kindergarten assessment remains a paper-based, face-to-face test.
• The Kindergarten test form is individually administered and adaptive.
• In the WIDA English Language Proficiency Standards (2007), a set of model performance indicators (MPIs) specific to Kindergarten were created. These standards were used to develop the current Kindergarten ACCESS test.
• Additional features embedded in the test design make it developmentally appropriate for this age group.
• Reading and Writing items allow students to demonstrate preliteracy skills that many Kindergarteners are still in the process of acquiring.
• Rather than including a wide variety of themes and topics as the different domains are assessed, tasks for all four domains were developed around just two unifying themes, a narrative text and an expository text. This minimizes the number of cognitive leaps a student has to make within each test domain.
• Many items involve the use of manipulative cards to engage the students in familiar types of activities.
• All of these characteristics were designed to help create a developmentally appropriate instrument.

**Kindergarten Limited Score Range**

While the full range of possible scale scores for the entire battery of ACCESS for ELLs 2.0 forms (K–12) is 100–600, the possible scale score range specifically for the Kindergarten ACCESS test form is 100–400. The limited scale range impacts the proficiency level score that it is possible to attain on Kindergarten ACCESS.

<table>
<thead>
<tr>
<th>Domain</th>
<th>Highest possible proficiency level score</th>
</tr>
</thead>
<tbody>
<tr>
<td>Listening</td>
<td>6.0</td>
</tr>
<tr>
<td>Speaking</td>
<td>6.0</td>
</tr>
<tr>
<td>Reading</td>
<td>5.0</td>
</tr>
<tr>
<td>Writing</td>
<td>4.5</td>
</tr>
</tbody>
</table>

This is not a score cap. Rather, not having the full scale score range that is available to Grades 1–12 also means some corresponding proficiency levels are also not available for Kindergarten. Literacy scores are most affected because preliteracy skills are still being acquired at this grade.

**Incomplete or Non-scored Domains and Composites**

Some score reports may have one or more language domains left blank or marked “NA” (Not Available). Composite scores are not computed if any language domain score is missing.

**NA Notation**

NA appears on the score report if one of the four Do Not Score codes has been filled in. NA appears both for the language domain marked with the Do Not Score code and any composite scores calculated using the domain, including the Overall score.

**Incomplete or Blank Tests**

The space on the score report for a domain score is left blank when:
• Do Not Score Codes were not filled in
• There is no evidence the student engaged with any scorable test item, as outlined by the attemptedness criteria.
<table>
<thead>
<tr>
<th>Domain</th>
<th>Minimum Criteria for “Attempting” the domain (Online/Paper)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Listening</td>
<td>There is at least one scored item in the domain with a response captured/bubbled.</td>
</tr>
<tr>
<td>Reading</td>
<td>There is at least one scored item in the domain with a response captured/bubbled.</td>
</tr>
<tr>
<td>Speaking</td>
<td>Online: Students must push the “Record” button for at least one scored item. A human voice need not be detected in the recording. Paper: Something has been bubbled on the Speaking response page.</td>
</tr>
<tr>
<td>Writing</td>
<td>Keyboarding: a visible key stroke is attempted. (Example, a letter, a symbol.) Space bar and returns do not count as attempted. Handwriting: there is some marking on the booklet in the response space.</td>
</tr>
</tbody>
</table>

*Practice items are not scored items and therefore do not count towards an “attempt.”

The score report will be left blank for both the individual language domain and any composite scores calculated using the domain.

**Examples**

Example 1: A student has a non-scoring code marked for the Reading part of the test. The student receives NA for Reading, Literacy, Comprehension, and the Overall score.

Example 2: A student logged in to the Speaking test, but there are no sound files, indicating that he or she did not push the Record button for any scored items. This indicates that the student did not meet the attemptedness criteria. Therefore, the Speaking, Oral Language, and the Overall scores will be left blank.

Example 3: Listening is marked NA and Speaking is blank. NA trumps blank fields, so Oral Language and Overall scores will be marked NA.

**Confidence Bands Depicting Standard Error of Measurement**

The Individual Student Report includes confidence bands for both domain and composite scale scores. Confidence bands are a graphic depiction of the Standard Error of Measurement (SEM) of the scale score. Figure 1 shows a sample.

**Figure 1: Sample Language Domain and Composite Scores**
ACCESS for ELLs 2.0 is a reliable and valid test of English language proficiency. Nevertheless, it—like all tests—is subject to a statistical concept known as the Standard Error of Measurement (SEM). This error is unrelated to potential errors introduced by scoring; DRC’s advanced scoring systems assure over 99.99% scoring accuracy. The SEM quantifies the variation of scores achieved if a student were able to take the same test over and over again without any change in ability.

In other words, imagine a hypothetical student, Lisa, taking ACCESS for ELLs 2.0 under these different conditions:

- Scenario 1: Lisa is healthy and well rested the day she takes the test.
- Scenario 2: Lisa is feeling sick the day she takes the test.
- Scenario 3: While Lisa takes the test, she hears loud noises in the next room.

Even though Lisa sees all the same test questions in each scenario, and her English proficiency level is constant, she will probably not get exactly the same score in every scenario. Because ACCESS for ELLs 2.0 is a reliable test, her scores would still be very similar to each other—but not exactly the same.

Therefore, ACCESS for ELLs 2.0 uses the SEM, which quantifies this variation. Applying the SEM, confidence bands are calculated to show a range of scores—so even if Lisa took the test under one of the other scenarios, her score would still fall in that range.

In the ACCESS for ELLs 2.0 score report, confidence bands are placed around the student’s score as a graphical representation of the SEM. These bands, which correspond to scale scores and not proficiency level scores, illustrate a student’s possible range of language proficiency based on his or her test score with a 95% probability of accuracy.

The SEMs for domain scores and the SEMs for composite scores are estimated differently. For domain scores, the SEMs are computed based on modern test theory using conditional SEMs; that is, each score on a domain test form (e.g., Reading, Grades 4–5, Tier A) has a different estimated SEM. For composite scores, the SEMs are estimated based on classical test theory and each composite score (e.g., Literacy, Grades 4–5) has the same SEM.
## PART II: ACCESS for ELLs 2.0 Score Reports

### Introduction

This section details the information contained in each of the ACCESS for ELLs 2.0 score reports and explains potential use of the data in various contexts. The following table summarizes the target audience or stakeholders for each score report and the types of information available from the test. Along with the score reports, teachers and administrators are encouraged to interpret ELLs’ performance by referring to the WIDA ELD Standards (2004, 2007, 2012) and the WIDA Can Do Descriptors.

**Suggestions on How to Use ACCESS for ELLs 2.0 Scores**

The Interpretive Guide for Score Reports is a resource for all member states in the WIDA Consortium. As the Consortium is currently comprised of multiple member states, this guide presents overarching suggestions with broad applicability. It is intended to assist stakeholders familiar with the test in interpreting the scores and using the information to help describe the English language proficiency of their ELLs. Individual member states are welcome to supplement this information.

ACCESS for ELLs 2.0 is an English language proficiency (ELP) test that is a representation of the WIDA ELD Standards. As such, stakeholders should note that ACCESS for ELLs 2.0 is a standards-referenced assessment. Stakeholders should take time to discuss the meaning of the results in relation to the standards and how the results affect the services, curriculum, instruction, and classroom assessment of ELLs.

Before examining data in the score reports, teachers and administrators should familiarize themselves with the WIDA Performance Definitions and the *Can Do Descriptors, Key Uses Edition*. The Performance Definitions are in Appendix A. The Can Do Descriptors are on the WIDA website. A more detailed discussion of the Can Do Descriptors is in the next section.

The following are suggestions for disseminating ACCESS for ELLs 2.0 score results:

- **Target certain reports to specific stakeholders.** Perhaps add a rationale for state or local policies or procedures that are being contemplated, formulated, or implemented based on test results. Provide a state-specific context that will help administrators and teachers understand the meaning and significance of the reports.

- **Offer professional development opportunities** to the various stakeholders impacted by the results to help them better understand scores and how to use them. For teachers, in particular, ensure that the test results are referenced to the ELD Standards. For purposes of interpreting the scores and information, present examples of reports of students/schools (with their identities withheld) for discussion.

- **Summarize or consolidate the suggestions for using the information** from each score report to target specific audiences. In the case of the Individual Student Report, any additional information accompanying the report should be parent friendly and translated into your state's major languages.
• **Examine different configurations of the data in the reports** (by language domain and combinations of language domains, including the Overall score) for individual and groups of students (such as by grade or tier) to develop a statewide, district or school plan for organizing services for ELLs for the upcoming school year.

• **Archive copies of the guide along with copies of the score reports** so that new personnel can become familiar with data from ACCESS for ELLs 2.0.

**Can Do Descriptors**

The *Can Do Descriptors, Key Uses Edition* is a WIDA publication that provides examples of what students can do at various levels of English language proficiency in Listening, Speaking, Reading, and Writing. The descriptors inform the use of ACCESS for ELLs 2.0 scores as they may assist teachers and administrators in interpreting the meaning of the scores. Educators may use the Can Do Descriptors in conjunction with the other components of the WIDA Standards Framework including Performance Definitions and Model Performance Indicators along with the original edition of the Can Do Descriptors.

The Can Do Descriptors are organized by grade-level bands: K, 1, 2–3, 4–5, 6–8, and 9–12 and correspond to those in ACCESS for ELLs 2.0. Within each grade-level band, the descriptors are organized by Key Use: Recount, Explain, Argue, and Discuss and within each Key Use, there are examples across WIDA’s six levels of language proficiency.

The WIDA ELD Standards as well as the *Can Do Descriptors, Key Uses Edition* can be found on the WIDA Consortium website at wida.wisc.edu.

**Individual Student Report**

**About This Report**

The Individual Student Report contains detailed information about the performance of a single student within Grades K–12. Its primary users are students, parents/guardians, teachers, and school teams. It describes one indicator of a student’s English language proficiency, the language needed to access content and succeed in school.

The Individual Student Report is provided in English. Translations of the report are available in 46 additional languages through DRC’s WIDA AMS system. The translated report should accompany (not replace) the official report in English. The list of languages and the Spanish translation are included in Appendix B.

**What does the report show?**

A profile of a student’s English language proficiency:

- how much English the student has acquired in each language domain
- information on the student’s Oral Language, Literacy, and Comprehension
- a graphic representation of the extent to which the student listens, speaks, reads, and writes English
Communication with the student’s parents or guardians is important. A Parent Guide for ACCESS for ELLs Score Reports is available to assist educators as they explain score reports to parents or guardians; see Appendix C for an example. Whenever possible, send a Parent Guide in the family’s native language along with the Individual Student Reports in English. Translations of the Parent Guide are available on the WIDA website at wida.wisc.edu/access-score-guides.

**Report at a Glance**

**Demographic Information about the Student**
Identifying information is located at the top right of the score report. This consists of the student’s name (last, first, and middle initial), date of birth, grade, and test tier, as well as state and district identification numbers, school, district, and state.

**Student’s English Language Proficiency Level by Language Domains**
ACCESS for ELLs 2.0 assesses language in four domains (Listening, Speaking, Reading, Writing). In the score report, each language domain is represented by a label, icon, and visual display of the results.

The four domain scores are followed by the four composite scores (Oral Language, Literacy, Comprehension, Overall). In the score report, each composite score is represented by a label, a breakdown of how individual domains are used to calculate it, and a visual display of the results.

The proficiency level score is presented both graphically and as a whole number followed by a decimal. The shaded bar of the graph reflects the exact position of the student’s performance on the six point ELP scale. The whole number reflects a student’s ELP level (1–Entering, 2–Emerging, 3–Developing, 4–Expanding, 5–Bridging, and 6–Reaching) in accord with the WIDA ELD Standards. ELLs who obtain Level 6, Reaching, have moved through the entire second language continuum, as defined by the test and the WIDA ELD Standards.

The decimal indicates the proportion within the proficiency level range that the student’s scale score represents, rounded to the nearest tenth. For example, a proficiency level score of 3.5 is halfway between the 3.0 and 4.0 cut scores.

To the right of the proficiency level is the reported scale score and associated confidence band. The confidence band reflects the Standard Error of Measurement (SEM) of the scale score, a statistical calculation of a student’s likelihood of scoring within a particular range of scores if he or she were to take the same test repeatedly without any change in ability. **Confidence bands are important because they remind test users that a single test score represents a range of possible outcomes and should never be interpreted as the only possible outcome.**
Description of English Language Proficiency Levels
The Individual Student Report provides information about the proficiency levels obtained by the student and describes what many students at the reported proficiency level may be expected to be able to do in English. For example, if the student received a proficiency level score of 2.2 for Speaking, his or her report will include a description of the type of spoken language he or she may be expected to be able to produce. A full list of the performance level descriptors for Kindergarten and Grades 1–12 are available in Appendix D. Figure 2 shows a sample Individual Student Report.

How to Use This Report

<table>
<thead>
<tr>
<th>How can the Individual Report be used when talking with parents/guardians, and what additional resources for doing so are available?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Help family members understand the student’s English language proficiency at:</td>
</tr>
<tr>
<td>• parent conferences</td>
</tr>
<tr>
<td>• family nights</td>
</tr>
<tr>
<td>• home visits</td>
</tr>
<tr>
<td>The Can Do Descriptors, which describe the expectations of ELLs at each level of English language proficiency, may be a helpful tool to share with family members. Teachers might explain the results from ACCESS for ELLs 2.0 by showing what their student “can do” in each language domain.</td>
</tr>
<tr>
<td>Can Do Descriptors (English and Spanish)</td>

**Individual Student Report 20XX**

This report provides information about the student’s scores on the ACCESS for ELLs 2.0 English language proficiency test. This test is based on the WIDA English Language Development Standards and is used to measure students’ progress in learning English. Scores are reported as Language Proficiency Levels and as Scale Scores.

<table>

</tr>
</tbody>
</table>
When interpreting scores, keep in mind:

- The report provides information on English proficiency. It does not provide information on a student’s academic achievement or knowledge of content areas.
- Students do not typically acquire proficiency in Listening, Speaking, Reading, and Writing at the same pace. Generally:
  - Oral language (L+S) is acquired faster than literacy (R+W)
  - Receptive language (L+R) is acquired faster than productive language (S+W)
  - Writing is usually the last domain to be mastered.
- The students’ foundation in their home or primary language is a predictor of their English language development. Those who have strong literacy backgrounds in their native language will most likely acquire literacy in English at a quicker pace than those students who do not.
- The Overall Score is helpful as a summary of other scores and because sometimes you may need a single number for reference. However, it’s important to always remember that it is compensatory; a particularly high score in one domain may effectively raise a low score in another. Similar overall scores can mask very different performances on the test.
- No single score or language proficiency level, including the Overall Score (Composite), should be used as the sole determiner for making decisions regarding a student’s English language proficiency. School work and local assessment throughout the school year also provide evidence of a student’s English language development.
- Do not compare scale scores from different domains. Each domain has its own scale, so scale scores should not be compared across domains, such as comparing Listening to Reading. Proficiency Level Scores can be used for such comparisons.
- As for comparing test scores from different years, either Scale Scores or Proficiency Level Scores can be used, though it will be easier to see changes when examining Scale Scores. This is discussed in more detail in Part II.

Speaking and Writing Interpretive Rubrics

Two interpretive rubrics are useful in interpreting performance-based information in this score report. They are the WIDA Speaking Rubric and the WIDA Writing Rubric (see Appendix E).

These rubrics may be used to help interpret the ACCESS for ELLs 2.0 Speaking and Writing scores and also to help inform instructional practices. The interpretive rubrics provide detailed information on the types of spoken and written language proficiency students may be expected to exhibit, based on their reported proficiency levels.

For example, the Sentence Level descriptions of the rubric address language forms and conventions. One characteristic of Level 2 (Emerging) is “repetitive sentence and phrasal patterns and formulaic grammatical structures used in social and instructional situations or across content areas.” Students at this level of proficiency may benefit from classroom activities which focus on improving their ability to use a wider range of written phrases and structures.

Please note that these rubrics are not used for operational scoring of the Speaking and Writing domains.
Speaking and Writing Scoring Scales
For operational scoring, raters use the Speaking Scoring Scale and the Writing Scoring Scale (see Appendix F). The scoring scales are derived from the interpretive rubrics. The differences between the interpretive rubrics and the scoring scales may seem subtle but are in fact important.

The scoring scales are designed to be as straightforward as possible for use in operational scoring, with the goal of maximizing rater reliability. For this reason, the scoring scales present less detailed descriptions of student performance than within the interpretive rubrics. The aim of the scoring scales is to retain the detail that is most important for raters to reliably score a student speaking or writing performance. These scales are for operational scoring only and should not be used to interpret test scores or inform classroom instruction.

<table>

Student Roster Report
About This Report
The Student Roster Report contains information on a group of students within a single school and grade. It provides scale scores for individual students on each language domain and composite score are provided, identical to those in the Individual Student Report. Its intended users are teachers, program coordinators/directors, and administrators.

Report at a Glance
The only information from the Individual Student Report that does not carry over to the Student Roster Report is the confidence bands. The information is also presented more compactly. The table format allows the performances of multiple individuals to be viewed at once. To put it another way:

| Compared to the Individual Student Report, the Student Roster Report: |
|--------------------------|--------------------------|--------------------------|
| Also provides scale scores and proficiency levels (the same) | Allows you to see the results of multiple students at once (different) | Does not include graphic depictions of scores or proficiency level descriptions (different) |

Demographic Information
The top of the report shows the district, school, and grade. Student names and their state IDs are listed along the left, followed by tier and grade-level cluster.

Tier refers to the form of the test administered that roughly corresponds to a student’s English language development: Tier A (Beginning); Tier B (Intermediate); or Tier C (Advanced). ACCESS for ELLs Online has three forms within a grade-level cluster (except Kindergarten). Due to the adaptive nature of ACCESS for ELLs online, scores will be reported for each tier. ACCESS for ELLs Paper has two forms, Tier A and Tier B/C. Due to state reporting requirements, on score reports Tier B/C will be reported as Tier C.
Cluster: ACCESS for ELLs 2.0 is divided into grade-level clusters that mirror those of the ELD Standards. While the Individual Student Report includes information on the student’s grade and tier, the Student Roster Report also includes grade-level cluster.

**Scale Scores**
Scale scores for individual students on each language domain (Listening, Speaking, Reading, and Writing) and composite score (Oral Language, Literacy, Comprehension, and Overall Score) are provided. They are identical to those in the Individual Student Report.

**Proficiency Levels**
Each scale score is interpreted into an ELP level, presented as a whole number and a decimal. The whole number indicates the student’s ELP level as based on the WIDA ELD Standards (1–Entering, 2–Emerging, 3–Developing, 4–Expanding, 5–Bridging, and 6–Reaching). The decimal indicates the proportion within the proficiency level range that the student’s scale score represents, rounded to the nearest tenth. For example, a student at ELP Level 4.5 has a scale score that falls half way between the cut points for Level 4 and for Level 5.

Figure 3 shows a sample Student Roster Report.

**How to Use This Report**
Because the Student Roster Report shows the results of multiple students from the same grade-level cluster, it is a useful way to look for patterns in student performance.

For example, among a group of students who all received an overall proficiency of 3.0, some may have received 3.0 for all the language domains. Others, however, may have a score profile of higher PLs for Listening, Reading, & Speaking, and a lower PL for Writing. Identifying such a pattern could help a teacher make decisions about how to group students and how to target writing support.

When examining the results of multiple students, remember that ACCESS for ELLs 2.0 is standards-referenced. The following table details the differences between norm-referenced and standards-referenced assessments.

<table>
<thead>
<tr>
<th>Norm-referenced ✗</th>
<th>Standards-referenced ✔</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ranks students</td>
<td>Determines whether each student has achieved specific skills or concepts.</td>
</tr>
<tr>
<td>Identifies group’s high and low achievers</td>
<td>Any student could receive any score: the number of proficiency level 5.0s assigned is not capped.</td>
</tr>
<tr>
<td>Not possible for all students to receive the same score</td>
<td></td>
</tr>
</tbody>
</table>

This is important to remember because it means that any student can achieve any score on the test. Each student’s score comes from his/her performance only, not in comparison to anyone else.

So, how can you analyze and compare the results in the student roster report? First, identify the similarities and differences in student performance for individual and combined language domains within a grade.
### Student Roster Report — 20XX

</tr>
</tbody>
</table>

**Overall Scores are computed when all 4 domains have been completed.**

NA – Not available = Student Booklet is marked with a Non-Scoring Code of Absent, Invalidate, Declined or Deferred Special Education/504

A – Oral Language = 50% Listening + 50% Speaking

B – Literacy = 50% Reading + 50% Writing

C – Comprehension = 70% Reading + 30% Listening

D – Overall Score = 35% Reading + 35% Writing + 15% Listening + 15% Speaking
• Are the differences justifiable or explainable, based on your knowledge of the students?
• Can they be attributed to students’ second language development, the design or delivery of instructional services, or other factors?

<table>
<thead>
<tr>
<th>Lower end of the scale</th>
<th>Upper end of the scale</th>
</tr>
</thead>
<tbody>
<tr>
<td>You may reasonably expect to see:</td>
<td>The majority of students’ scores fall mid-range along the English language proficiency level scale. However, comparing their score profiles can also tell you a lot.</td>
</tr>
<tr>
<td>• newcomers</td>
<td>• examine the profiles of students who are within potential range of exiting support services</td>
</tr>
<tr>
<td>• students with limited or interrupted formal schooling</td>
<td></td>
</tr>
<tr>
<td>• ELLs whose initial literacy development is in their native language</td>
<td></td>
</tr>
</tbody>
</table>

Now that you’ve noted the similarities and differences, what can you do with them? They can be one factor considered as you do any of the following things:

• Group students for support services
• Develop school and district improvement plans for ELLs
• Use the WIDA ELD Standards to inform instruction
• Come up with professional development ideas for teachers serving ELLs in the upcoming year

**Frequency Reports**

**About These Reports**

There are three types of frequency reports. They all show the number and percent of tested students to attain each proficiency level within a given population. The three frequency reports are

• School Frequency Report
• District Frequency Report
• State Frequency Report

The primary audience for frequency reports typically includes program coordinators/directors, administrators, and boards of education.

**Reports at a Glance**

The six levels of English language proficiency with their brief definitions form the vertical axis of this table. Then, each language domain and combination of domains is divided into two columns. The first column reports how...
many students scored at each language proficiency level. The second column shows the same group, but as a percentage of the total number of students in that grade tested by the school/district/state.

The Frequency Report provides the highest and lowest scale scores reported in the four language domains for ELLs tested in the stated grade of the specified school/district/state. For example, on the School Frequency Report for Grade 2 at Sample School, you would see the number and percent of the school's second graders to receive each proficiency level for all the domains and composites. You would also see the highest and lowest scores received by a second grade student for Listening, Reading, Speaking and Writing, though it would not identify the student(s) who received those scores. Kindergarten scale scores go from 100 to 400. Scale score for Grades 1–12 go from 100 to 600, although scale scores over 500 are rare. The difference between the highest and lowest score is the range of performance.

The shaded row at the bottom left-hand side of the page relates the total number of ELLs tested on ACCESS for ELLs 2.0 in the stated grade of the specified school/district/state.

Figure 4 shows a sample School Frequency Report. Again, the District Frequency Report and State Frequency report will look the same, just with a different name and with information reflecting the district and state level respectively. Appendix G provides samples of the District Frequency Report and State Frequency Report.

**How to Use These Reports**

How can the Frequency Reports be used by educators at the school, district, and state level?

- They provide a glimpse of the performance of all ELLs across language domains and combination of domains at the time of testing.
- They help you gain a sense of the school/district/state-wide effort towards educating ELLs.
- They can shape the type and amount of support offered to students.
- They are useful when planning, developing, or restructuring language services for ELLs.
- They can (and should) be cross-referenced with other data sources, such as academic achievement tests, to compare ELL students with proficient English students (especially former ELLs being monitored and other linguistically and culturally diverse students).
- Do not generalize the results unless there are relatively large numbers of students. Use both the actual student number and the percent.

Why do the frequency reports include both actual student numbers and percentages? Which one is better to use?

- Using percentages is a useful way to compare populations of different sizes.
- However, a small population size distorts percentage results, and should not be generalized.

07/05/2016
Keep in mind that adding description of the students in terms of their language, cultural, and experiential backgrounds helps contextualize the frequency reports. Information provided in this report may have to be further contextualized to be meaningful; numbers alone cannot explain why the distribution of students assigned to language proficiency levels falls as it does. For example:

- Perhaps School A recently received new students with limited exposure to English, and School B did not.
- Perhaps students in District A are highly mobile while those in District B have experienced more continuous, uninterrupted schooling.
- Perhaps students in State A are more linguistically diverse than those in State B, where most students share a common native language. Note that in some states, students’ native language is a component of support that is to be taken into account in program design.

**Suggestions for Sharing Results**

For purposes of communicating information to various stakeholders, such as local boards of education or community groups, the data may be graphically displayed in the form of a histogram, with each language level color-coded. In Figure 5 below, the students appear to be achieving greater proficiency in reading than the other domains (note: sample does not contain real data).

**Figure 5: Sample Frequency Histogram**

In the same vein, differences in performance of students by grade from year to year on ACCESS for ELLs 2.0 may be graphically displayed. To interpret the results more accurately, it is important to note the percent of matched pairs of groups of students; that is, how many ELLs in one year remained in the program and district the next year.
### WIDA Performance Definitions - Listening and Reading Grades K–12

**Within sociocultural contexts for processing language...**

#### Level 6 - Reaching

English language learners will process a range of grade-appropriate oral or written language for a variety of academic purposes and audiences. Automaticity in language processing is reflected in the ability to identify and act on significant information from a variety of genres and registers. English language learners’ strategic competence in processing academic language facilitates their access to content area concepts and ideas.

At each grade, toward the end of a given level of English language proficiency, and with instructional support, English language learners will process...

**Level 6 - Reaching**

English language learners will use a range of grade-appropriate language for a variety of academic purposes and audiences. Agility in academic language use is reflected in oral fluency and automaticity in response, flexibility in adjusting to different registers and skillfulness in interpersonal interaction. English language learners' strategic competence in academic language use facilitates their ability to relate information and ideas with precision and sophistication for each content area.

At each grade, toward the end of a given level of English language proficiency, and with instructional support, English language learners will produce…

Informe individual del estudiante 20XX

Este informe brinda información sobre el nivel de desarrollo del alumno en la prueba de desempeño lingüístico en inglés ACCESS for ELLs 2.0. Esta prueba se basa en los estándares de desarrollo del idioma inglés de WIDA y se emplea para medir el progreso de los alumnos en el aprendizaje del inglés. Los resultados se informan como Niveles de desempeño lingüístico del idioma y como Escalas de puntaje.

Parent/Guardian Guide to the Individual Student Report, Grades Kindergarten-12

What is the Individual Student Report?
The Individual Student Report shows your child’s scores on the ACCESS for ELLs 2.0 assessment. This report is for families and educators.

The top of the report includes your child’s name, date of birth, grade level, test tier, school and district name, state, and the district and state identification numbers.

What does the Individual Student Report tell me?
The report shows the eight scores your child could receive on the test. If your child took all four sections of the test, he/she will receive all eight scores. NA, or not available, indicates no score was reported.

There are four Language Domain scores and four Composite Scores.

Language Domain scores are reported for Listening, Speaking, Reading, and Writing. These scores reflect the four sections of the test.

Composite Scores are combinations of your child’s Language Domain scores. The four Composite Scores are Oral Language, Literacy, Comprehension, and the Overall score.

How are the scores reported?
Proficiency Level scores are reported as numbers that range from 1.0 – 6.0, for example 4.0 or 2.2. These scores correspond to the six WIDA English Language Proficiency Levels. A score of 1.0 can be thought of as a “beginner” score, while a 6.0 can be thought of as an “advanced” score in regards to English proficiency. The graph on the report is shaded to represent your child’s Proficiency Level score. The table at the bottom of the report provides examples of what students at your child’s proficiency level can do with English.

Scale Scores are reported as numbers that range from 100 – 600, for example 356 or 220. These scores reflect your child’s grade level and difficulty level of the test items that he/she successfully completed. Scale scores are helpful to see the progress your child makes in English language development from year to year. The graph on the report shows your child’s Scale Score for each of the eight scores, and it also shows the Confidence Band for each of his/her Scale Scores.

Confidence Bands are the shaded area around each of your child’s Scale Scores. This shows the possible range for your child’s score with a 95% probability of accuracy. In other words, if your child took the same test repeatedly, there is a 95% chance that his/her scores would be within the shaded range.

ACCESS 2.0 is an English language proficiency assessment for Grades K–12. The test measures the English language development of students identified as English language learners.

wida.wisc.edu
What should I look for in my child’s report?
We encourage families to look at all of the scores reported for their child. Here are some suggestions for how to interpret, or make sense of, your child’s scores:

- **Look at the Language Domain scores.** Look at his/her Proficiency Level scores for Listening, Speaking, Reading and Writing. Which scores are closer to 6.0? Which scores are closer to 1.0?
- **Look at the Composite Scores.** Look at his/her Proficiency Level scores for Oral Language, Literacy, Comprehension, and the Overall Score. Which scores are closer to 6.0? Which scores are closer to 1.0?
- **Compare this year’s scores with last year’s scores, if available.** If your child took ACCESS for ELLs 2.0 last year, compare his/her scores from one year to the next. Is there a difference in his/her Proficiency Level scores? Is there a difference in his/her Scale Scores?

How are the test scores used?
Scores from ACCESS for ELLs 2.0 can be used in many ways. Parents can use the scores to advocate for their child. Teachers use the scores to plan instruction and assessments. Districts use the scores to evaluate their language support programs, to monitor student progress in acquiring English, and to determine if a student is eligible to exit an English language support program. Scores are also used to meet federal and state accountability requirements.

Questions to ask
We encourage families to discuss the scores with their child’s teacher(s). Here are some questions to ask:

- What scores does he/she need to exit the English language support program?
- Will my child take this test every year?
- How are the scores shared with his/her teachers?
- What type of English language support do you provide my child?
- What would you like to know about how my child uses language at home?
- Why did my child receive a score of NA?
- What does a score of NA mean?

If you have questions about your child’s ACCESS for ELLs 2.0 scores, please contact your child’s school.

</table>
| 6     | use English to communicate orally and participate in all academic classes, for example:  
|       | - React and respond to multiple points of view  
|       | - Organize and present research-based information  
|       | - Clarify how or why something happens  
|       | - Persuade others based on opinions, examples and reasons |
| 5     | use English to communicate orally and participate in all academic classes, for example:  
|       | - Discuss the causes and impact of events  
|       | - Summarize and relate information  
|       | - Present and justify ideas showing how or why  
|       | - Express and defend opinions backed by examples and reasons |
| 4     | communicate orally in English using language related to specific topics in school and can participate in class discussions, for example:  
|       | - Compare stories, issues, concepts  
|       | - Paraphrase and summarize information  
|       | - State ideas to show how or why with examples  
|       | - Give opinions supported by detailed reasons |
| 3     | communicate ideas and details orally in English using several connected sentences and can participate in short conversations and discussions in school, for example:  
|       | - Relate stories or events  
|       | - Share ideas and provide details  
|       | - Describe processes or procedures  
|       | - Give opinions with reasons |
| 2     | communicate ideas and information orally in English using language that contains short sentences and everyday words and phrases, for example:  
|       | - Share about what, when, or where something happened  
|       | - Compare objects, people, pictures, events  
|       | - Describe steps in cycles or processes  
|       | - Express opinions |
| 1     | communicate orally in English using gestures and language that may contain a few words, for example:  
|       | - Ask and answer simple questions about what, when, or where something happened  
|       | - Name familiar objects, people, pictures  
|       | - Show how to solve problems using words and gestures  
<p>|       | - Express personal preferences |</p>
<table>

</table>
| 6     | Understand oral language in English and participate in all academic classes, for example:  
  • Synthesize information from multiple speakers  
  • Recognize language that conveys information with precision and accuracy  
  • Create models or visuals to represent detailed information presented orally  
  • Identify strengths and limitations of different points of view |
| 5     | Understand oral language in English and participate in all academic classes, for example:  
  • Expand on others’ ideas  
  • Distinguish events, people or situations from oral descriptions  
  • Recall key information and details about processes or concepts discussed orally  
  • Identify examples and reasons that support an opinion or viewpoint |
| 4     | Understand oral language in English related to specific topics in school and can participate in class discussions, for example:  
  • Exchange information and ideas with others  
  • Connect people and events based on oral information  
  • Apply key information about processes or concepts presented orally  
  • Identify positions or points of view on issues in oral discussions |
| 3     | Understand oral language related to specific common topics in school and can participate in class discussions, for example:  
  • Connect spoken ideas to own experiences  
  • Find, select, order information from oral descriptions  
  • Identify the causes and effects of events or situations discussed orally  
  • Classify pros and cons of issues in discussions |
| 2     | Understand oral language related to specific familiar topics in school and can participate in class discussions, for example:  
  • Identify main topics in discussions  
  • Categorize or sequencing information presented orally using pictures or objects  
  • Follow short oral directions with the help of pictures  
  • Sort facts and opinions stated orally |
| 1     | Understand oral messages that include visuals and gestures and may contain a few everyday words or phrases in English, for example:  
  • Recognize familiar words and phrases in conversations  
  • Match information from oral descriptions to objects, figures or illustrations  
  • Follow one-step oral directions  
  • Show agreement or disagreement with oral statements |

<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Linguistic Complexity

- **Discourse Level**: The text is fully comprehensible and appropriate to purpose, situation, and audience; comparable to the writing of English proficient students meeting college- and career-readiness standards; and includes:
  - Extended connected text (single or multiple paragraphs) that is organized and shows tight cohesion in the precise expression of ideas.
  - Clear evidence of consistency in conveying an appropriate perspective, register, and genre.

- **Sentence Level**: A full range of sentence patterns and grammatical structures matched to content area topics; consistent use of appropriate conventions to convey meaning, including for effect.

- **Word/Phrase Level**: Consistent usage of just the right word or expression in just the right context related to content area topics; facility with precise vocabulary usage in general, specific, or technical language.

### Language Forms and Conventions

- **Discourse Level**: A full range of sentence patterns and grammatical structures matched to content area topics; consistent use of appropriate conventions to convey meaning, including for effect.

- **Sentence Level**: A broad range of sentence patterns and grammatical structures matched to the content area topic; nearly consistent use of appropriate conventions to convey meaning, including for effect.

- **Word/Phrase Level**: Usage of technical and abstract content-area words and expressions as appropriate; usage of words and expressions with precise meaning related to content area topics as appropriate; vocabulary usage that fulfills the writing purpose.

### Vocabulary Usage

- **Discourse Level**: Usage of specific and some technical content-area words and expressions as appropriate; usage of words and expressions with multiple meanings or common collocations and idioms across content areas as appropriate; vocabulary usage that generally fulfills the writing purpose.

- **Sentence Level**: Usage of some specific content words and expressions as appropriate; usage of common cognates, words, or expressions related to content areas as appropriate; vocabulary usage that attempts to fulfill the writing purpose.

- **Word/Phrase Level**: Usage of general content words and expressions; usage of social and instructional words and expressions across content areas; possible usage of general vocabulary where more specific language is needed.
Appendix F: WIDA Scoring Scales

Figure F-1: WIDA Speaking Test Scoring Scale

<table>
<thead>
<tr>
<th>Score point</th>
<th>Response characteristics</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Exemplary</strong> use of oral language to provide an elaborated response</td>
<td>• Language use comparable to or going beyond the model in sophistication&lt;br&gt;• Clear, automatic, and fluent delivery&lt;br&gt;• Precise and appropriate word choice</td>
</tr>
<tr>
<td><strong>Strong</strong> use of oral language to provide a detailed response</td>
<td>• Language use approaching that of model in sophistication, though not as rich&lt;br&gt;• Clear delivery&lt;br&gt;• Appropriate word choice</td>
</tr>
<tr>
<td><strong>Adequate</strong> use of oral language to provide a satisfactory response</td>
<td>• Language use not as sophisticated as that of model&lt;br&gt;• Generally comprehensible use of oral language&lt;br&gt;• Adequate word choice</td>
</tr>
<tr>
<td><strong>Attempted</strong> use of oral language to provide a response in English</td>
<td>• Language use does not support an adequate response&lt;br&gt;• Comprehensibility may be compromised&lt;br&gt;• Word choice may not be fully adequate</td>
</tr>
<tr>
<td><strong>No response (in English)</strong></td>
<td>• Does not respond (in English)</td>
</tr>
</tbody>
</table>

**Scoring processes**

Select the score point that best describes the overall response relative to the qualities of the model
- Check to ensure each bullet point is met
- If not, check one level below

**Scoring notes & rules**

- For P1 tasks, assign a score of **Adequate and above** if the response includes more than one word in English. This includes an article plus noun (e.g., “a chair”), and words repeated verbatim from the model.
- For P3 and P5 tasks, students may take up and use language from the model and should not be penalized for this. This is particularly relevant for personal-preference tasks.
- At all task levels, simply repeating or reading all or part of the task question should be scored **Attempted**.
- At all task levels, responses of “I don’t know” should be scored **Attempted**.

**Off-task response**: The response shows no understanding of or interaction with the prompt. It may answer another, unrelated task. A response that is entirely off task receives a score of **Attempted**.

**Off-topic response**: The response shows a misinterpretation of the instructions. An off-topic response is related to the prompt, but does not address it. (Note that this does not refer to task completion—for example, if a student is asked for 3 reasons and gives 1, this should be scored based on language use and is not considered off topic.) **The maximum score for an off-topic response is Adequate.** If any part of the response is on topic, the entire response is scored as on topic.

</table>

Note: This scoring scale is only for scoring ACCESS for ELLs 2.0 and the WIDA Screener. For interpreting ACCESS for ELLs 2.0 results and for evaluating classroom writing tasks, see the Interpretive Rubric for Writing.
For scoring ACCESS for ELLs 2.0 and the WIDA Screener only

### Scoring process

The 11 possible score points are as follows:

| 1 | 1+ | 2 | 2+ | 3 | 3+ | 4 | 4+ | 5 | 5+ | 6 |

After reading the entire response, make an initial decision about which score point best captures the response as a whole (e.g., Score Point 3). Then, check the three descriptors (discourse, sentence, and word/phrase) for that score point.

- If all three descriptors are a good fit for the response, award the whole score point (e.g., Score Point 3).
- If there is clear evidence that one or two descriptors at a higher score point are a better fit, refer to the plus level scoring guidance below to confirm and award a plus score point (e.g., Score Point 3+). If the plus level scoring guidance does not confirm a plus score point, review anchor papers, descriptors, and the response, and start the scoring process again.
- If there is clear evidence that one or two descriptors at a lower score point are a better fit, go down one score point, refer to the plus level scoring guidance below to confirm, and award a plus score point (e.g., Score Point 2+). If the plus level scoring guidance does not confirm a plus score point, review anchor papers, descriptors, and the response, and start the scoring process again.

#### Plus level scoring guidance

| 1+: Text that conveys one clear idea with one simple or complex sentence structure, but may contain grammatical errors, and may have vocabulary beyond the prompt and/or minimal text |
| 2+: Text that shows at least one noticeable attempt at organization, and/or at least one complex sentence structure, and/or at least one noticeable instance of use of vocabulary beyond the prompt and stimulus; however, text may have a heavy dependence on the stimulus and prompt, and/or resemble a list of simple sentences (which may be linked by simple connectors), and/or contain noticeable grammatical errors that interfere with meaning when attempting beyond simple sentences |
| 3+: Text that shows clear organization and complex sentence structures and/or the text may have an unexpected strong use of vocabulary beyond the stimulus and prompt, but the text may be repetitive and/or contain noticeable errors, breakdowns or inconsistencies that interfere with meaning |
| 4+: Text that shows strong organization, a variety of sentence structures and a wide range of vocabulary, but that may fall short in addressing purpose, situation and audience, and/or may contain noticeable inconsistencies and awkwardness in grammar and/or vocabulary that do not interfere with meaning. |
| 5+: Text that shows sophisticated organization and clearly demonstrates an overall sense of unity throughout, and/or purposeful use of a variety of error-free sentence structures, and/or precise use of vocabulary; however, text may not be fully tailored to the purpose, situation and audience, and/or may contain some minor grammatical errors, and/or may lack some precision in vocabulary |

Note: This scoring scale is only for scoring ACCESS for ELLs 2.0 and the WIDA Screener. For interpreting ACCESS for ELLs 2.0 results and for evaluating classroom writing tasks, see the Interpretive Rubric for Writing.
### Additional scoring rules

**Nonscorable:** The response is blank; consists only of verbatim copied text; consists only of text that is completely off task; or is entirely in a language other than English.

**Completely off-task response:** The entire response shows no understanding of or interaction with the prompt. It may be a memorized, previously practiced response or appear to answer another, unrelated prompt. A response that is entirely off task is **nonscorable**.

**Completely off-topic response:** The entire response shows a misinterpretation or misunderstanding of the prompt. An off-topic response is related to the prompt, but does not seem to address it as intended. However, the response is clearly not a memorized, previously practiced response. These responses are scored in their entirety using the scoring scale; however, the maximum holistic score for a completely off-topic response is 2+.

**Partially off-task response:** The response contains both off-task and on-task writing. These responses are scored by ignoring the off-task portion (which may be memorized and previously practiced) and scoring only the on-task portion using the scoring scale.

**Partially off-topic response:** The response contains both off-topic and on-topic writing (i.e., a portion of the response shows a misinterpretation or misunderstanding of the prompt). These responses are scored in their entirety using the scoring scale.

### Glossary

**Awareness of audience:** Words, sentence structures, and text forms that are deliberately selected to suit the intended readers of a response

**Awareness of purpose:** Words, sentence structures, and text forms that are deliberately selected to serve the purpose of a writing task

**Awareness of situation:** Words, sentence structures, and text forms that are deliberately selected for the situation in which the writing task is taking place

**Chunks of language:** Memorized strings of very simple language

**Complex sentence structures:** Sentences with more than a subject, verb, and possible object (for more information, see the *Sentence Complexity Guidelines*)

**Discourse:** Extended written language conveying multiple connected ideas

**Minimal text:** Letters, words, or chunks of language

**Overall sense of unity:** Unity within text and across ideas

**Reformulated expressions:** Paraphrasing and adaptation of language used in the prompt and stimulus

**Simple sentence structures:** Subject and verb, may include a direct or indirect object (for more information, see the *Sentence Complexity Guidelines*)

**Vocabulary:** Words and phrases
